Sprint 1

Sprint 2

In sprint 1 it seems that we had an even velocity throughout the entire sprint. In comparison, in sprint 2 it seems we completed most tasks in the final 2 days of the sprint. I think this is due to most people in our group being busy with midterms during sprint 2, which is why we finished most of our tasks in the later portion of the sprint.

On average each task for sprint 2 was also bigger than the average task for sprint 1, which also could have led to a longer completion time.
